APHANOMYCES ROOT ROT

Aphanomyces euteiches

WHAT SHOULD I LOOK FOR?

Initial honey-brown discoloration of root and area above the seed up to the soil line as shown in plants on right hand side, compared to healthy plants on the left. Nodulation on roots may also be poor. Roots become darker as disease progresses and eventually die
 L. Porter, ARS USDA

Aboveground yellowing will occur starting at the bottom leaves, followed by wilting and death

HOST RANGE

Range of legume crops and weed species including peas, beans, clovers and medics

ASHY STEM BLIGHT (CHARCOAL ROT)

Macrophomina phaseolina

WHAT SHOULD I LOOK FOR?

Sunken lesions develop on the stem, as shown here in seedlings. Lesions have sharp margins and may contain concentric rings
H. Schwartz, Colorado State University, Bugwood.org

As the disease progresses, dry rot of the stem and pale, ash-coloured "dust" develop
H. Schwartz, Colorado State University, Bugwood.org

Small black survival structures (*microsclerotia*) develop in dead tissue
P. Bachi, University of Kentucky Research and Education Center, Bugwood.org

HOST RANGE

Very wide, host range infecting over 500 plant species including members of the pumpkin, bean, brassica and pepper families.

BLACK ROOT ROT

Thielaviopsis basicola (aka. *Chalara elegans*)

WHAT SHOULD I LOOK FOR?

Initially long red lesions appear on the root which eventually turn black
 Virginia Tech Learning Resources Center

Tap root may become stunted, aboveground plant may also become stunted, wilt and possibly die
 N. Cattlin, Alamy Stock Photo

<p>WHERE WILL I SEE SYMPTOMS?</p>  <p>ROOTS</p>	<p>FAVOURABLE CONDITIONS FOR DISEASE DEVELOPMENT</p> <div style="display: flex; justify-content: space-around;">   </div> <p>WARM WET</p> <p>• 17-25°C</p>

• 5 to 6 year break from host crops

• Minimise irrigation splash

HOST RANGE

Wide host range, including beans, peas, cotton, lettuces, lucerne, lupin and soybean

BLACK SPOT (ASCOCHYTA BLIGHT)

Didymella pinodes often in a disease complex with *Phoma medicaginis* var. *pinodella*,

Phoma Koolunga and *Didymella pisi*.

WHAT SHOULD I LOOK FOR?

Irregular dark brown to black spots that develop into large purplish-black lesions on stems, leaves and pods.
M. Wunsch, North Dakota State University

Concentric rings and black survival structures (pycnidia) can often be seen in the middle of the lesion.
M. Wunsch, North Dakota State University

<p>WHERE WILL I SEE SYMPTOMS?</p> <p>• In severe cases</p>	<p>FAVOURABLE CONDITIONS FOR DISEASE DEVELOPMENT</p> <p>• 18-22°C</p>
---	--

HOST RANGE

Most severe on peas, but also infects lentils, alfalfa, faba beans, clover and vetch

FUSARIUM ROOT ROT

Fusarium solani f. sp. phaseoli

WHAT SHOULD I LOOK FOR?

Aboveground plants may initially appear yellow, stunted and wilted and eventually may die
H. Schwartz, Colorado State University, Bugwood.org

Belowground lower root may die off and secondary roots may form above the diseased area
H. Schwartz, Colorado State University, Bugwood.org

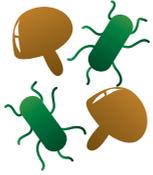

Cutting the stem reveals drying out and reddening of the taproot
H. Schwartz, Colorado State University, Bugwood.org

HOST RANGE

Green beans

PEA WILT

Fusarium oxysporum f. sp. pisi

WHAT SHOULD I LOOK FOR?

Aboveground yellowing of leaves, begins at the base of the plants and progresses upwards. Stunting of plants is also common. *L. Porter, ARS-USDA*

Belowground brown to black lesions form around seed and root tissue that start small and then grow together to form large lesions. *L. Porter, ARS-USDA.*

Rot may only be confined to the outer layers of the root and cutting off the outer sheath reveals healthy inner tissue, as shown in the two outer plants. *L. Porter, ARS-USDA.*

WHERE WILL I SEE SYMPTOMS?

• In severe cases

FAVOURABLE CONDITIONS FOR DISEASE DEVELOPMENT

• 25-30°C • High soil moisture favours disease

DISTRIBUTION IN THE FIELD

SCATTERED

Individual/small patches of infected plants

HOW DOES IT SPREAD?

CONTAMINATED PLANT DEBRIS

HOST RANGE

Peas

PYTHIUM STEM ROT

Pythium spp.

WHAT SHOULD I LOOK FOR?

Brown discoloration and soft rot of lower plant stem
H. Schwartz, Colorado State University, Bugwood.org

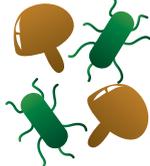

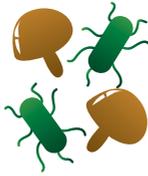

Watery rot and white fluffy growth may also develop on pods post-harvest. Unlike Sclerotinia, no black fruiting with survival bodies (sclerotia) will form
B. Olson, Oklahoma State University, Bugwood.org

HOST RANGE

Very wide host range, including all legumes and most vegetable crops

RHIZOCTONIA ROOT ROT

Rhizoctonia solani

WHAT SHOULD I LOOK FOR?

Infected seedlings may appear stunted and sunken; red lesions on root and lower stem are visible. In some cases new roots form above the diseased area, and the plant can continue to grow satisfactorily. Infection in older plants may occur

(a) E. Sikora, Auburn University, Bugwood.org. (b) H. Schwartz, Colorado State University, Bugwood.org

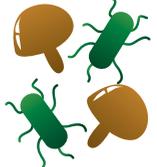

Aboveground yellowing of leaves begins at the base of the plants and progresses upwards. Stunting of plants is also common

L. Porter, ARS-USDA

HOST RANGE

Very wide host range, including all legumes and most vegetable crops

SCLEROTINIA ROT (WHITE MOULD)

Sclerotinia sclerotiorum | *S. minor*

WHAT SHOULD I LOOK FOR?

Symptoms begin as water-soaked lesions which eventually rot and collapse. As the disease progresses, characteristic white fluffy growth develops followed by black survival structures (sclerotia).

N. Cattlin, Alamy Stock Photo

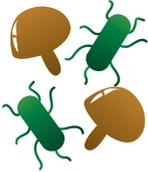

Survival structures (sclerotia) can also develop on (a) stems and (b) can be up to 25mm long in *S. sclerotiorum* and much smaller (up to 3mm long) in *S. minor*

(a) NY State IPM Program, Bugwood.org (b) C. Balbalian, Mississippi State University, Bugwood.org

HOST RANGE

Very wide (more than 400 different plant species), including most vegetable crops

SCLEROTIUM ROT

Sclerotium rolfsii

WHAT SHOULD I LOOK FOR?

Watery rot that eventually leads to collapse of infected area. Characteristic white “ropy” fungal growth develops along with light brown survival structures (sclerotia)

Bridget Lassiter, NCDA & CS, Bugwood.org

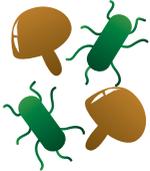

Survival structures may develop on the infected tissue or soil surface resembling mustard seeds

Clemson University, Bugwood.org
